About Me

B.Sc. in Computer Science | Military Status: Exempted

Cloud-native DevOps Engineer and Backend Developer with a strong track record of building and operating production services. Highly skilled in **Linux, Docker, Kubernetes, and GCP**. Proven ability to automate deployments via CI/CD (GitHub Actions, Jenkins), engineer scalable infrastructure, and troubleshoot distributed systems. Active competitive programmer with deep interests in cybersecurity, system design, and observability.

Work Experience

Software Engineer Intern – Egyptian Space Agency (EgSA), Earth Observation Data Dept. Aug 2025 – Nov 2025

- Built backend services for the Egyptian Heritage Satellite Atlas using **TypeScript** and **Google Earth Engine** to process imagery for land-use mapping.
- Administered **GCP/Linux** infrastructure and engineered **GitHub Actions** CI/CD pipelines, automating application builds and deployments while resolving production incidents to maintain service uptime.

Projects

PeerLink – Distributed File Sharing Platform [repo](#) [🔗](#)

- Built a fault-tolerant file-sharing system utilizing **TypeScript, Node.js, React, Docker, Redis, and PostgreSQL**, featuring a microservices backend with **Redis Cluster** coordination, leader election, and high-availability persistence mechanisms.

HoneyKube – AI-Powered Kubernetes Honeypot [repo](#) [🔗](#)

- Developed an LLM-driven honeypot using **Python, Kubernetes, Docker, and OpenRouter** to emulate vulnerable environments and aggregate threat telemetry, while designing the cluster infrastructure and troubleshooting container orchestration and networking anomalies.

GUIShell – High-Performance Remote Desktop Engine [repo](#) [🔗](#)

- Created a low-latency remote desktop via **Electron, WebRTC, and Node.js** utilizing a custom MJPEG-over-DataChannel streaming protocol, supported by a scalable **SQLite**-backed signaling server and fully automated release pipelines using **Electron Builder**.

Education

Modern Academy – B.Sc. in Computer Science

Sept 2022 – May 2026

- **Cumulative Grade:** Excellent (A-) with Second-Class Honors (GPA: 3.29 | 89.76%)
- **Graduation Project:** Excellent (A+)
- **Project Details:** Built an "Amazon Go" style fully autonomous checkout system. Engineered and deployed the core AI model, featuring zero-shot product identification via text prompts (e.g., "milk carton") without requiring a custom dataset.

Key Achievements

- **TurboNodeIO** [🔗](#): Built a native C++ acceleration layer for Node.js, achieving up to **317× faster** I/O performance and **71× faster** SIMD checksum processing.

Technical Skills

Programming: C++, TypeScript, JavaScript, Python, Bash

Backend & DBs: Node.js, Microservices, REST APIs, PostgreSQL, SQL, Redis, Prisma ORM

DevOps & Cloud: Docker, Kubernetes, CI/CD (Jenkins, GitHub Actions), GCP, Linux Admin, Nginx, Git, Container Networking

Networking & Security: OSPF, VLANs, STP, EtherChannel, Subnetting, Penetration Testing, Web Security

Additional Skills & Activities

Languages: Arabic (Native), English (Fluent)

Activities: Competitive Programming (Codeforces, LeetCode), ECPC Participant, ICMTCTF Participant

Soft Skills: Leadership, Problem-Solving, Teamwork, Self-Learning, Adaptability
